This is a novel of Antarctica in the not too distant future. The NYANG is still flying VXE-6s old C-130s. However, no one remembers VXE-6 or the Navy at all. My favorite passage is: . . . They sat eating, resting, thinking it over. It was strange, Val thought, how heavy a mark those first expeditions had left on the people in Antarctica; they composed the continent's only shared culture, really. No one knew what had happened here in the International Geophysical Year, no one knew what the U.S. Navy years had been like . . . Nothing remembered but the beginning.

The three maps are not included in this ARC.

The author became interested in Antarctica while doing research for his novels on Mars. He got a trip to the ice to find background information for this novel.

A tale of adventure in the Antarctic continent. A British lord inherits several 16th century Mayan artifacts which lead him to undertake an expedition to an active volcanic Antarctica. There, in an area south of Bovet's Island, he discovers mummified Mayans, gold utensils, and a live Brontosaurus Excelsus.

I could not find any reference to this book in any of my sources except for USN which lists it under Miscellaneous. There is also a London issue in the USN and both entries are dated 1901 with a question mark following the date in the London entry. The book has been reprinted numerous times in several formats; paperback, hardback and spiral plastic ring binding.

Book is part of the Red-Letter Series. The back cover has a list of other Red Letter books which includes this book. The original price of this book was FIFTY CENTS.

The Renard number is for the original hardbound 1992 edition.

The *Discovery* was specially built for Scott's first expedition (1901-04). Her subsequent history was no less exciting as she was used for the annual supply ship for the Hudson Bay Company and during World War I ferried vital food supplies to France's Atlantic ports and munitions to Archangel in northern Russia. She was sent south again to rescue Shackleton's men marooned on Elephant Island in 1916 and again in 1925 (the "Discovery Expeditions") and on Mawson's BANZAR Expeditions 1929-31. This book contains much new material on these and other facets of the interesting history of this famous ship.

- The author specially thanked Roland Huntford who made it possible to publish this book in English. Queen Maud Land, the Norwegian sector of Antarctica was annexed on 14 January 1939. It remains one of the least explored regions in the world. Norway's highest mountain was still unclimbed when thirteen men left Cape Town in a Russian ice breaker on Christmas Eve 1993. On 2 February 1994 three members of the expedition reached the summit of Ulvetanna. I guess they think Queen Maud Land is part of Norway.

- Patrick Trese, and cameraman Bill Hartigan, went to the ICE to make a movie about Operation Deep Freeze. This book . . . "In which one of those slick filmmakers proves (to his own satisfaction at least) that he's a very clever fellow" --- Gaston C. Renard . . . apparently old Gaston C. didn't like the book, or Trese. However, its easy for me to identify with this book.

First published in 1958 as *Richard Byrd. Boy Who Braved the Unknown*. This edition has a different illustrator, a new format and a few extra pages. The extra pages are due to the addition of a list of illustrations and the back matter. Some of the chapter titles have changed and notably those chapters that had the word "I" did this , or "I" did that, have been changed to the third person. I guess that was done in order to make the titles politically correct.

A beautifully illustrated and well-produced book on the highly important U.S. Exploring Expedition led by Charles Wilkes. The expedition, financed & equipped by the U.S. Government and comprising 6 vessels was a magnificent undertaking and made numerous discoveries in the Pacific and Antarctic Regions, including several landfalls along Wilkes Land and visits to the South Shetland Islands, Macquarie Island and Louis Phillippe Peninsula. The accounts of Samoa, Fiji and other Pacific locations are of prime importance, particularly in relation to the changes wrought since earlier European visits. The natural history and ethnological collections were acquired by the Smithsonian Institution and several magnificent publications were produced in which many Pacific species were first described—a substantial number of the illustrations are reproduced in this book. The original monographs are all rare or very rare.

Published simultaneously in London, New York, Melbourne and Sydney. First published in 1945. Following printed on verso of title page: "This book is produced in complete coformity (sic) with the authorized economy standards." To prove it the text is printed in small type that is very close to the edges of the paper. The boards are very thin and slightly limp.

The plot involves a British engineer, who designs trans-Atlantic rafts drifts to Antarctica with a stowaway, an American heroine. Landing at 67° 30'S, 77° 10'E, they discover a warm valley inhabited by Leprechauns and Atzlaneans who are influencing the outcome of World War II. The Atzlaneans are the actual people from Atzlan a lost civilization which formed the basis for the myth of Atlantis.

The author was a prolific writer of spy stories prior to the outbreak of WW II. During the war he worked as a Wing Commander in the British War Cabinet. After the war, in order not to comprise the Official Secret's Act, he refrained from writing spy novels until a sufficient time had passed. In the interim he wrote this novel.

Wright was the physicist and glaciologist on Scott's last expedition. This nicely done book shows via his journals, memoirs, and letters, his view of events on the expedition.

*The laid in print, which is the color print, on a card, of the *Terra Nova*, with signature and personal inscription by Colin Bull is in a frame hanging in my office.

**The portrait frontispiece of Silas was provided for the book by John Katsuftrakis.

***Colin claims that there are 237 exquisite drawings, but I didn't count them. 400 drawings were done for the original mss by Pat Wright, but she could find no publisher for her edited version of the original diary.

Colin Bull had known Sir Charles Wright since 1952 and while he was working in Antarctica he named the first area where he worked "Wright Valley".

In all the books I have ever read about Scott's expeditions you never hear about anyone having a bowel movement. Shackleton did and Amundsen did, but Scott never did take a shit. However, in this book, Silas describes a bowel movement as "taking a dump". That is dating a slang term that I thought to be of recent vintage. Unless of course Colin edited the "dump" into the mss.
