ANTARCTIC JOURNAL OF THE UNITED STATES

In January 1966 the National Science Foundation (NSF) and the U.S. Naval Support Force Antarctica (NSFA), distributed the first issue of the *Antarctic Journal*. This “new” publication combined two earlier publications—the *Antarctic Report* (NSF) and the *Bulletin of the U.S. Antarctic Projects Officer* (NSFA)—that had been published independently by the two agencies since the International Geophysical Year. The goal of the journal was to provide a common outlet for information on the scientific and logistic aspects of the U.S. effort in Antarctica to a broad audience that includes program participants and interested observers.

Although the content of the journal has remained consistent with the original goals set by NSF, format and frequency have changed a great deal since its inception. During its first decade the journal was published six times a year and had a page count ranging from about 260 to 360 pages per year. In an effort to cut costs, NSF reduced the frequency of publication, in 1976, from six issues a year to four but did not reduce the number of pages published during the year. Shortly after this, in 1977, the changing needs and interests of the antarctic science and logistics community caused NSF to again modify the journal’s frequency and length, and the journal took on its present appearance—short quarterly issues and a substantially longer fifth issue that reviewed the preliminary results of research projects conducted as part of the U.S. national program in Antarctica.

July-August No. 4, pp 137-138, ***Deep Freeze Personnel, Winter 1971***.

November-December, No. 6, pp 255-257. ***Emotional Aspects of Wintering Over***, by Capt R. E. Strange & Capt Sam Youngman. Neither of these guys wintered over, but Sam knew some who did. Doc Sam, who was sometimes known as: "Fat Sam", was responsible for some of the adverse emotional aspects of wintering over. In his assumed duties of counseling the New Zealand wives of wintering over personnel, following their Saturday night telephone conversations with their husbands, he was able to provide great comfort at the time of their greatest physical needs. When Sam wasn't comforting CheChe Widows or couldn't interview individuals who had wintered over he got his information second-hand from Sue Bell. Sue, who must have been an amateur psychiatrist, had quite a store house of valuable information about the emotional aspects of wintering over which she gathered on her couch, actually it was her bed. She was able to pass this information to Sam the same way she got it—in her bed. It is not surprising that the Department of the Navy disclaimed the validity of this article when it was originally read, by Doctors Youngman and Strange, before the Sixth Annual Conference of Surgeons General of the Americas, Washington, D.C., November 1970. The National Science Foundation strongly denies any knowledge of this research paper, but secretly wish that they had funded the project.
